

Droserin

- UPPER AND LOWER RESPIRATORY TRACT DISEASES
- INFECTIOUS CHILDHOOD ILLNESSES
- ALLERGIES
- ECZEMA, ACNE, DRY SKIN
- ANXIETY, RESTLESSNESS, CRYING

Droserin is a bioinformation regenerative cream with a balanced combination of herbs and high content of Podhajska mineral spring water. The cream contains highly effective substances such as liposomes, AHAs, vitamins and peat extracts. Droserin is sought after for its strong antibacterial and antiviral effects.

Bioinformation comprises frequencies which simulate the control frequencies of subcortical brain structures which regulate the autonomic nervous system and the function of viscera. Bioinformation acts to offset negative information and induce a reverse regenerative process.

Energy effects of Droserin according to TCM principles

Droserin may particularly influence and harmonize the following energy meridians: lungs, large and small intestines, heart, liver, and stomach.

Effects of Droserin

Infection One of the main areas where Droserin can be effective is the throat and bronchi, for treatment of cough, scratchy throat, chills or upper respiratory tract infections. Droserin may relieve a sore throat and warm up the affected areas and supply them with blood as it is rich in ginger and thyme. Mullein, coltsfoot and licorice support expectoration. Droserin actually acts as an “antimicrobial ointment”, which may be used especially at the onset of a bacterial or viral infection, and may also be used preventively, particularly when used before going into crowded areas.

Smokers should use Droserin (ideally in combination with Ruticelit) preventively whenever they have breathing difficulties. Cigarette smoke chemicals impose a significant burden on the lungs; therefore, lung regeneration should be consistently supported.

In the event of year-round or chronic rhinitis and the imminent risk of inflammation spreading to the sinuses (sinusitis), Droserin should be applied to the cheeks and around the nose (and/or above all facial sinuses). Thanks to the content of hyssop and Iceland lichen, Droserin may have antiinflammatory effects; it also contains essential oils which may help ease breathing. It may be also used to treat fever as the turmeric and quinine extracts may help lower body temperature. Cold weather, however, can bring on more than rhinitis and colds; it also often irritates facial skin which is constantly exposed to frost and weather changes without any major protection. Skin irritated by cold weather is prone to dry red blemishes especially on the cheeks. Droserin may be effective in treating them. Particularly in small children, Droserin may be effective in the early stages of upper respiratory tract diseases. It is applied to the bronchial area (in the same way as the traditionally used herbal ointment called “Dog Lard”). Regeneration should be supplemented with internal application of Drags Imun (or Vironal in children). In the early stages of all viral childhood illnesses (varicella, rubella, measles, mumps, etc.), it is suitable to apply Droserin repeatedly. It may alleviate and shorten the course of disease, prevent high temperatures and skin sequelae, and enable the body to create a sufficient amount of antibodies which will provide for the immune system’s natural defenses in adulthood.

Skin Droserin may be chosen to treat any dry area on the body. It may be especially effective on dry palms (hands are a significant means of communication with the external world). Any eczema or flaky rash may improve with administration of Droserin thanks to the antiinflammatory and healing effects of plantain, horsetail and Japanese pagoda tree. Droserin may be used as a protective day cream to prevent negative environmental effects (skin-drying wind and cold). Droserin may stimulate the skin’s radiance.

Allergy Droserin may be a suitable product for skin and respiratory allergic reactions. In case of asthmatic complaints, Droserin may be applied to the chest and back.

Abdominal pain Droserin is also suitable to reduce flatulence and bloating. It is appropriate to apply it in circular motions to the lower part of the abdomen below the navel (clockwise to mimic the colon direction). If you suffer from such complaints, it is advisable to combine Droserin with internal use of Vironal.

Psyche In mental conditions accompanied with restlessness, crying and anxiety, Droserin has proven useful when applied to the area of the sternum.

Usage of Droserin

- Colds, cough, rhonchus, scratchy throat, rhinitis, inflammation of the upper respiratory tract and the middle ear, improvement of vocal cord function, to ease breathing, expectoration and clearing of facial sinuses; works best at the onset of infection
- Immune support
- Regeneration of lungs damaged by cigarette smoke
- Cold sores
- Universal cream base and hand cream for dry skin and clogged pores
- Alleviation and shortening of the course of viral childhood illnesses (varicella, rubella, mumps, etc.), lowering of fever
- Allergic skin reactions and asthma
- Bloating, intestinal complaints
- Dry eczema, skin hydration
- Nuchal muscle relaxation

Droserin cream may be combined with other Energy products.

Main usage of Droserin

Composition of Droserin

Common lungwort, wild marjoram, narrowleaf plantain, denseflower mullein, common licorice root, Japanese pagoda tree, coltsfoot, garden nasturtium, turmeric, hyssop, quinine, Iceland lichen, garden thyme, downy hemp-nettle, pale rose, Manchurian angelica tree, garden ginger, common horsetail, althea. Droserin also contains vegetable oils (sesame, castor, linseed, hempseed, poppy seed), essential oils (e.g. camphor, fennel, palmarosa, guajac wood), Podhájská mineral spring water, potassium humate, a combination of myrrh, frankincense and dracena extracts and bioinformation from plants, fungi and minerals (antimony, rose quartz, purpurite, copper, etc.).

Regenerative process and application method

Droserin is easy to spread and is water soluble. A thin layer is applied locally to affected areas 1–3 times a day. The cream can be applied topically to areas corresponding to the internal locations of different organs, to reflexology zones or acupuncture points for both acute problems and for chronic diseases or feelings of discomfort. The cream can be applied through massage or directly to affected areas.

A temporary deterioration of the condition signifies that a reverse regenerative process, also known as a reverse reaction, is taking place. This phenomenon is positive and can be influenced by decreasing application frequency and increasing fluid intake. In these types of cases, we recommend discussing the issue with your consultant or therapist.

Warning: Store in a dry place, out of direct sunlight, between 10°C and 25°C. Protect from frost.
