

## Cytovital

- SKIN REGENERATION AND REJUVENATION
- SCARS, PIGMENTATION MARKS
- PROTECTION OF SKIN AGAINST HARMFUL RADIATION
- HARMONIZATION OF ENDOCRINE GLAND FUNCTION
- GYNECOLOGICAL PROBLEMS
- FERTILITY AND PREGNANCY ISSUES

**Cytovital is a bioinformation regenerative cream with a balanced combination of herbs and high content of Podhájska mineral spring water. The cream contains highly effective substances such as liposomes, AHAs, vitamins and peat extracts. This product's main power is concentrated on harmonizing the hormonal system and nourishing and rejuvenating skin cells.**

**Bioinformation** comprises frequencies which simulate the control impulses of subcortical brain structures, which regulate the autonomic nervous system and the function of viscera. Bioinformation acts to offset negative information and induce a reverse regenerative process.

### Energy effects of Cytovital according to TCM principles

Cytovital may influence and harmonize mainly the conception vessel, heart, stomach, three burners (triple energizer) and spleen meridians.

### Effects of Cytovital

**Skin** Cytovital is popular because it may significantly regenerate and visibly rejuvenate skin cells, imbue the skin with needed moisture and protect it from adverse effects. It is an ideal day or night cream. It may help prevent formation of wrinkles because it protects the skin against the effects of UV rays and free radicals, and also provides sufficient skin hydration. These benefits are derived from the composition of Cytovital. In addition to vitamins and essential oils, Cytovital's key ingredient is succinic acid, which has been known for millennia for its rejuvenating effect. Cytovital also contains fungal extracts, which may protect cells against various types of radiation (making topical application of Cytovital suitable on sunny days and after sun-tanning sessions), and last but not least vanilla, lavender and butter-and-eggs extracts, which play important roles in Cytovital's regenerative ability. It is excellent as a concentrated regenerative face mask.

Cytovital may also be used to treat pigmentation marks, also known as liver spots, which usually appear on the arms, hands or face. Cytovital may stimulate optimum pigmentation distribution and act as an antioxidant, even in deep skin layers.

Cytovital may work well for treatment of scars, as the Eurasian Solomon's seal and lavender extracts it contains may be effective on scar tissue. Applying Cytovital may make the skin smoother, help regenerate deep layers of skin and soften scars. Because the effect of Cytovital's active ingredients is deep, it may be used to treat cellulite.

Due to its humates and liquorice, ginger and dracena extracts, Cytovital may have significant antiinflammatory and healing effects. It may be an excellent choice to accelerate healing of all types of wounds. It may be very suitable for skin regeneration following radiation.

**Endocrine system and pregnancy** One of Cytovital's important properties may be its ability to harmonize the endocrine system by acting directly on the skin. Cytovital may be able to regulate endocrine gland function because it contains extracts of medicinal plants such as vanilla, Eurasian Solomon's seal, pennywort, Szechuan pepper and anise. Cytovital may also regulate thyroid gland function effectively as well as other endocrine organs. Women with painful or irregular menstrual cycles have reported positive experiences with Cytovital, for example, as well as those suffering from premenstrual breast pain. Cytovital cream may be very effective against gynecological infections when applied to the lower abdomen. External usage of Cytovital along with internal administration of Gynex and Cytosan is an ideal combination for these types of ailments and has proven effective many times even in diagnostically ambiguous cases of heavy bleeding between menstrual cycles, ovarian cysts or uterine fibroids.

It may be beneficial to use Cytovital to activate the hormonal system when trying to conceive; the cream is applied in this case to the area corresponding to the location of the reproductive organs and breasts. Combining Gynex with Cytovital may further increase the probability of conception. And during pregnancy, Cytovital may strengthen uterine function, thus helping to ensure a smooth pregnancy. Regular application of Cytovital with gentle massaging of the skin may help prevent stretch marks.

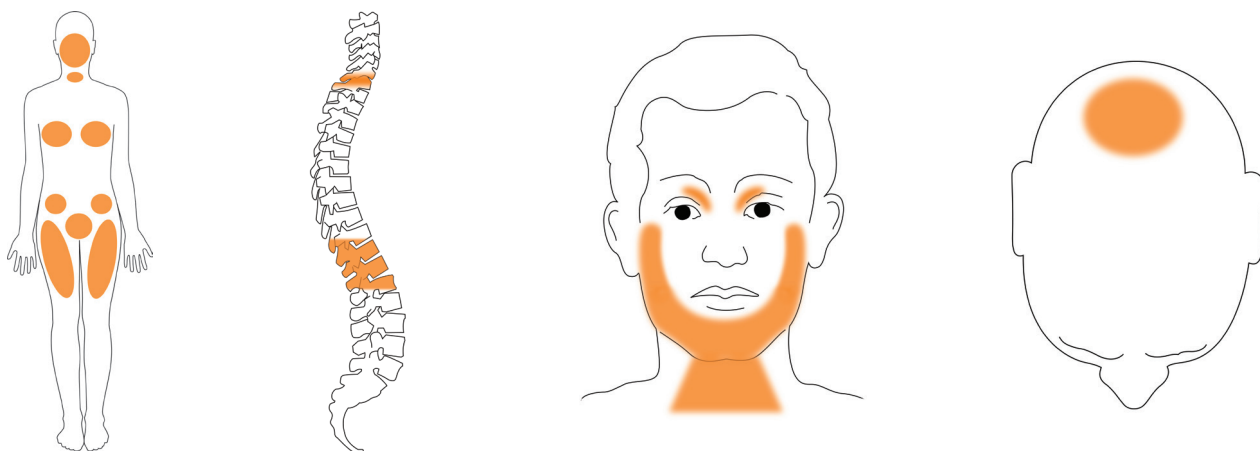

**Psyche** Application of Cytovital to the temples, above the eyes and between the eyebrows may enhance endurance while working (studying and creative processes), make estimates more realistic (mathematics, economics), and help develop a sense of certainty in difficult personal situations. It may reinforce clairvoyance, gentleness and empathy and the ability to put yourself in someone else's shoes and help out. It may strengthen feminine energy.

## Usage of Cytovital

- Regeneration, hydration and rejuvenation of the skin, prevention of wrinkles, pigmentation marks, stretch marks
- Protection against the effects of UV rays and free radicals
- Skin growths, subcutaneous cysts and lipomas
- Prevention of cellulite
- Healing of wounds (scabs, abrasions, etc.), reducing scar formation and improving the appearance of scars
- Harmonization of thyroid gland and endocrine system function
- Ovarian, thyroid gland and breast cysts, uterine fibroids, vaginal yeast infections, atrophic vaginitis, regulation of irregular, painful menstruation
- Increase of the probability of conception, improvement of reproductive organ functions
- Protection of the skin against radiotherapy damage

Cytovital cream may be combined with other Energy products.

## Main usage of Cytovital

## Composition of Cytovital

Vanilla, English lavender, Eurasian Solomon's seal, liquorice, sweet fennel, Asian pennywort, Szechuan pepper, garden ginger, saxifrage, Muira puama, maral root, butter-and-eggs, Baical skullcap.

Cytovital cream also contains vegetable oils (linseed, sesame, castor and others), essential oils (e.g. lavender, cardamom, cedarwood, African marigold), succinic acid, vitamins A and E, lecithin, Podhájska mineral spring water, potassium humate, snail egg extract (helixin), California earthworm extract (vermesin), myrrh, frankincense, and dracena extracts, bioinformation from minerals (olivine, antimony, purpurite) and other natural substances.

## Regenerative process and application method

Cytovital is easy to spread and is water soluble. A thin layer is applied locally to affected areas 1–3 times a day. The cream can be applied topically to areas corresponding to the internal locations of different organs, to reflexology zones or acupuncture points for both acute problems and for chronic diseases or feelings of discomfort. The cream can be applied through massage or directly to affected areas.

A temporary deterioration of the condition signifies that a reverse regenerative process, also known as a reverse reaction, is taking place. This phenomenon is positive and can be influenced by decreasing application frequency and increasing fluid intake. In these types of cases, we recommend discussing the issue with your consultant or therapist.

**Storage:** Store in a dry place, out of direct sunlight, between 10°C and 25°C. Protect from frost. Keep out of reach of children.
